ALLSTATE DATA SECURITY

The security of the products provided at Allstate Printing is extremely important. Everything Allstate manufactures, from start to finish, has great value because it is a component of the customer's business and because it has a monetary value.

Allstate Printing has one of the most thorough security programs available in card manufacturing today with video cameras monitoring and recording all critical internal operations, as well as all the surrounding areas of our facility 24/7. Thorough background checks and Personal access cards are required for all employees to ensure access is granted only to those areas necessary for each individual to complete their job duties.

Allstate has the ability to monitor your cards using bar code scanners to ensure that all cards are coded correctly, packaged and grouped correctly and ultimately master packed and shipped correctly to the proper destination every time. All PIN disks are stored in a locked, limited access room. The disks are stored in a safe within this controlled room. And all PIN disks are encrypted. All card production waste is kept and maintained in a locked container until destruction, which is witnessed by an Allstate waste management team.

ALLSTATE QUALITY STANDARD

PIN Data Verification

Allstate Printing uses electronic eyes to verify that the cards we print and produce are a 100% accurate.

Allstate understands that excellent card production includes high-speed data imaging and encoding that is free from error.

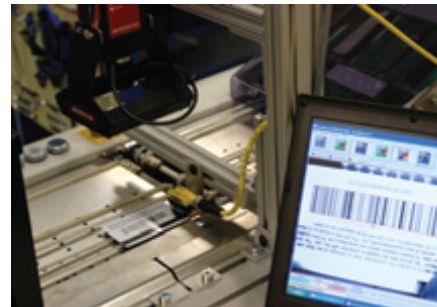

Bar Code Verification

At Allstate, Electronic eyes are just one of the tools we use to deliver the most quality assured card production in the card printing industry.

State of the Art Barcodes

Allstate encoding equipments have Barcode grading system that rejects lower grade barcodes so new cards can be made with clearer barcodes and legibility.

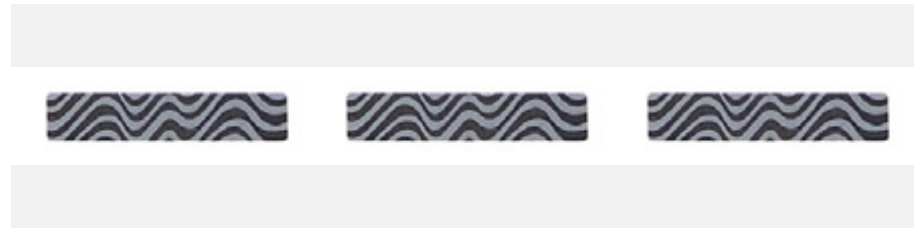

Scratch Off Label Quality Assurance

Security Scratch off panels secure PIN numbers prior to use by the end user.

Panels are generally over-printed with a secure black and silver scratch-off panel (lottery type) that deters fraud.

In case of standard scratch off label is used, we have QC staff to routine check every 500 cards to ensure all labels are easily scratchable.

ADDITIONAL MANUFACTURING CAPABILITIES

Ultrasonic Sealing

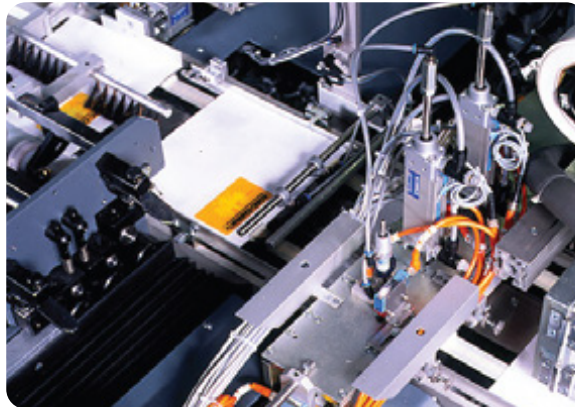

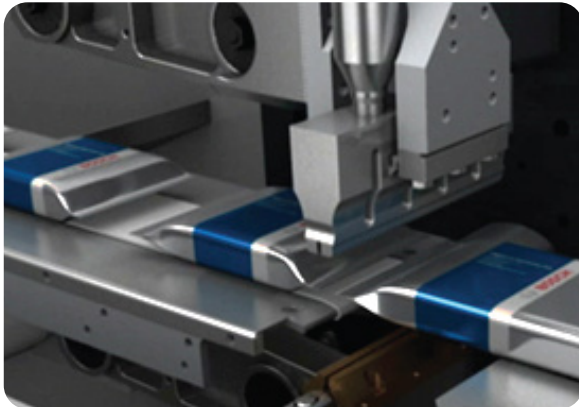

Allstate offers Kora Wrapped (individually card wrap) 4-sided ultrasonic security sealing that provides a greater amount of security against number theft.

Card Affixing

Allstate Printing offers a variety of packaging options to meet all of your card needs. Allstate also bundles any cards into specific quantities at your request, then shrink wraps and packages them according to your needs.

Custom Cartons

Allstate Printing has a variety of packaging options available. Allstate has a dedicated design department to develop options for customers requiring custom packaging/cartons solutions.

FACILITY SECURITY

Employees / Visitors

Allstate follows strict screening procedures during pre-employment, employment and post-employment period of Full-time, Part-time, Temporary employees, Consultants, Security Guards.

Every employee is issued an ID Badge and access card.

All visitors access to this area is through an electronically operated door controlled via a security system. Visitors are not allowed into the company premises with photo or video cameras, tape recorders etc.

Company Premises

Allstate premises are located in an area which is serviced by public law enforcement and fire protection agencies. The facility is secured with intrusion alarm system and is protected by auxiliary power backup system in the event of power failure.

Access control systems and CCTV camera surveillance are installed.

Enterprise Security

The Allstate enterprise security system focuses on protecting the security and integrity of the data being stored and managed on the computer systems, or transmitted over networks.

Firewall systems have been implemented with failover and packet and application level monitoring.

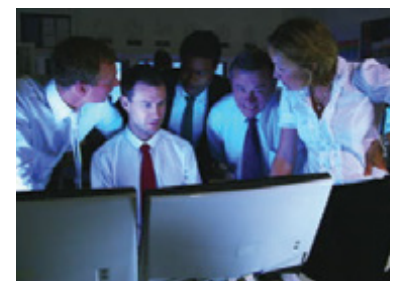

We use industry standard intrusion detection, network monitoring and anti-virus tools.

The Pinning files are received through secured data network. The network is installed with appropriate fire walls and anti-virus tools.

After verification with the client, this data is sent to the network computer on the Pinning machine

The computer Pin files are destroyed after the Card pinning takes place.

All extra cards pinned are kept in a special bin and later shredded in a shredding machine.
